DESCRIPTION
Water body name based on the 2005 FL DEP TMDL GIS layer. See below for more detailed information on naming convention method.

Florida County name provided by sampler input or based on the 1997 FWRI_countyshore_24k GIS layer.

Decimal degrees latitude; North American Datum 1983

Decimal degrees longitude; North American Datum 1983

Date when sample was collected.

Local time (24 hour) when sample was collected.

Type of sample collected: NRDA = post-impact sample; NRDA baseline = baseline sample following NRDA protocol; Other = baseline sample that either does not follow NRDA protocol (e.g., a long-term monitoring site) or may not yet have a NRDA protocol (e.g., as of 7/7/10 – fish samples). For certain NOAA samples, NRDA-MW was used (MW = Mussel Watch).

Water chemistry sample.

Sediment sample. See further explanation below.

Intertidal sediment sample.

Subtidal sediment sample.

Benthic sample.

Fish sample.

Submerged aquatic vegetation sample

Shellfish sample.

Photograph sample.

Other information relevant to sample.

Name of sampler/contact.
Email address or phone number of sampler/contact.
Division/association of sampling agency.
Site ID provided by sampler.
Sampling agency.
Number used for internal tracking purposes.

ciated with each sample could either indicate the actual number of samples taken or that at
as taken at the site depending if the sampler provided the information.

ed on the 2005 GIS layer "DEP Water Bodies (TMDL)". Naming convention:

ame from the name the field samplers entered (unless it was obviously errant or too specific, e.g., beach name), e was entered for an area by different samplers, then the name was assigned by either 1) the majority of similar ne that was similar to the PlanUnit field in the original DEP layer [for some areas with a vague name from the Pl the Florida Atlas and Gazetteer (Delorme 2000)]. Areas that could not be easily assigned a name were labeled nearest major city name, e.g., "Coastal_Taylor Co" or "Coastal_Jacksonville".

Sediment samples would be categorized into intertidal and subtidal. However, not all samplers provided in. But to standardize the dataset, the Sediment field was filled out for every sediment sample provided. For e: s left as is. If Intertidal or Subtidal was entered it was also included in the generic Sediment field, which is used :ategorizing Sediment into the two categories for the entire dataset will occur.
